Key B2B software deals in May 2024

PRIVATE EQUITY

Office of the CFO / Others – GRC

 **AUDITBOARD** to be acquired for **\$3Bn** (announced on May 23th, [more details](#))

- Auditboard offers a **risk workflow / GRC platform which enables users to store all audit, risk, ESG, and compliance data in one single system of record.**
- After a \$40m Series B round in 2018 led by Battery Ventures, **HG Capital will acquire the company in a \$3Bn deal.**
- The company achieved **\$200m in ARR in the end of 2023.**

Others – Location software

 **IQGEO** to go private in a **\$396m deal** (announced on May 14th, [more details](#))

- IQGeo Group provides **geospatial software to design and manage network infrastructures** of telecoms and utility companies.
- The \$396m deal from KKR values the company **6.3x FY+1 revenue** and **31.4x FY+1 EBITDA offer price**, a 19% premium to the stock's last close before the announcement.

SQUARESPACE

Application Development, Devops & IT Operations

to go private in a \$6.9Bn deal (announced on May 14th, [more details](#))

- Squarespace offers **SaaS website design and hosting solutions.**
- Squarespace achieved **\$1.0Bn in revenue (+16.8% YoY)** with a **12.2% EBITDA** margin in FY23 with projected **19.0% in growth** and **21.8% EBITDA margins** for FY25.
- The Permira **\$6.9Bn all-cash deal** values the company **5.7x FY24 revenue** and **26.2x FY24 EBITDA**, which is a **15% and 29%** premium vs. respectively **closing price the day prior the acquisition and the 90-day average.**

CORPORATE M&A

Cybersecurity

 **CYBERARK** acquires  **Venafi** for **\$1.5Bn** (announced on May 20th, [more details](#))

- Venafi offers **security solutions for digital identity management.**
- It is expected to add a **\$150m in ARR** (95% of total revenue) and generates synergies through up-sell, cross-cell and geographic expansion.

Payment & eCommerce

 **Corpay** to acquire  **paymerang** for **~\$475m** (announced on May 8th, [more details](#))

- Paymerang is a US-based **invoice and Accounts Payable (AP) automation.** The company claimed in 2023 a **40% growth in revenue since 2018.**
- Corpay, the **corporate payments solutions company**, seek to better cover **AP automation and 4 verticals** (education, healthcare, hospitality, manufacturing).

Cybersecurity

 **Akamai** to acquire  **noname** for **~\$450m** (announced on May 8th, [more details](#))

- Noname Security helps better **protecting APIs from attacks** through a security platform. Akamai offers a range of **cloud and cybersecurity solutions** and will strengthen its **existing API security product.**
- Noname Security is expected to generate **\$20m in revenue for FY+1.**

VENTURE CAPITAL

Application Development, Devops & IT Operations

scale, an **LLM customization platform** raised **\$1Bn** in a late-stage funding round valuing the company **\$13.8Bn** (announced on May 21st, [more details](#))

 **WAYVE**, a Microsoft-backed company developing **AI-based automated driving** raised **\$1bn** with Softbank and Nvidia (main new investors) (announced on May 20th, [more details](#))

HG Capital further strengthens its exposure to the GRC market with Auditboard, looking to develop and expand a modern audit and risk management platform

Foundation | AuditBoard was founded by former auditors and childhood friends Daniel Kim and Jay Lee in 2014. The software started out as a specialized SOX(6) audit workflow tool, before being expanded to cover a broader range of use cases (including financial/internal audits and cybersecurity). Today, the company is said to serve 1,750+ customers, including 40% of Fortune 500 firms^[4].

What does it do? | AuditBoard offers a risk workflow platform which enables users to store all audit, risk, ESG, and compliance data in one single system of record. The system helps companies to be more organized and efficient with their audit and compliance processes. The system can be used to support a variety of audits, including financial, internal, and cybersecurity audits. Users can store their controls in a registry, and information can be exported as a CSV file. According to one alum, software represents 97% of the company's revenue.

Differentiation | AuditBoard is fairly differentiated, mainly due to:

- Their strong subject-matter expertise**, as their sales and support representatives come from an auditing background
- Their unlimited users and unlimited storage model**, which is particularly attractive for enterprises operating at a large scale (i.e., Walmart)
- The strong interconnectivity** between their different modules, as they have a **'one-click approach'**
- Their strong pricing**, as their solution is said to be **very-well priced** for the market when compared to competing solutions

- AuditBoard serves a **wide variety of customers**. Though they started out offering SOX support to SMBs, they now target **mid-sized and enterprise-grade businesses** across a broad range of verticals (i.e., tech, retail, pharma). They report that they work with **40% of the Fortune 500**, showing their success at the top end of the enterprise market. Their solution is **highly scalable**, meaning that they can continue to support mid-sized companies as they scale and become large enterprises. Their client base is primarily made up of the US businesses, but they also have some clients in Europe.
- AuditBoard is a **challenger** in a **niche segment** (Integrated Risk Management^[5] space) of a **large emerging fragmented market** (information security and risk management). Gartner report that, on a global level, firms spent \$6.2 billion on IRM in 2022, with a YoY growth of 15.4% from 2021, and they predict that this growth trend will continue^[4]. The company competes against a high number of competitors, with **Diligent** said to be their closest competitor.
- AuditBoard's competitive positioning is **not likely to be disrupted**, as the market in which they operate is a **highly resilient market of cross-segment relevance that is set to grow**. This growth will likely be due to the increasing trend of vendor risk management and to the increase in the use of IRM tools for cybersecurity audits. However, the market has experienced a period of fragmentation, and there is an influx of **new entrants** in the space which could pose a threat to AuditBoard, making it harder for the company to win deals.
- In terms of growth prospects, AuditBoard's strong growth** (60% YoY in 2022) **is likely to continue**, driven by (1) the increasing demand for GRC workflow software, (2) their capacity to upsell to client companies, (3) the increase in cybersecurity use cases for IRM, (4) the increasing focus on vendor risk management. They will also be able to grow through internationalization, though it is said that their geographic expansion will be hindered by the fact that their team is predominantly English-speaking.
- AuditBoard's sales team is strong**, and because all of the company's reps have a background in auditing, they understand the concerns of clients and prospects, helping them to forge closer connections and to perform better in client-facing scenarios. Their sales model is hybrid, as they do both direct sales and indirect sales (through a network of partners such as **PwC**).
- The **company had a recent change in leadership in 2020**, bringing in seasoned CEO **Scott Arnold**. Arnold previously held the position of CEO at Shutterfly, and AuditBoard has also recruited a number of C-level additions to the company.
- Despite its strong positioning, **AuditBoard should improve through technical development**, as they should (1) develop a mobile interface, which would serve as a strong differentiator, (2) work on strengthening the tool's capacity to integrate with external solutions, (3) work on developing AI-powered functionalities in order to remain competitive in a technologically evolving market.

Agenda

- B2B software space valuations went down (1.0%) in May to 5.7x EV/Sales NTM
- US interest rate cuts will not come to reality until inflation cools down closer to FED's objectives
- Guidance in 1Q '24 has been affected by worsening macro-environment
- Appendix

While 1Q got kicked-off with encouraging cloud consumption figures from AWS, GCP and Azure, it ended up disappointing investors on revenue guidance

Key negative releases in Q1 '24

mongoDB

workday

salesforce

- **Disappointing 1Q earnings** with an **increasing number of software companies in our watchlist missing the consensus**, and a **large majority guided Q2 below consensus**, indicating a **challenging environment**.
- **Despite expectations, AI revenue hasn't significantly boosted forward estimates**, and its impact has been limited to certain areas like compute. Meanwhile, companies are investing heavily in AI, leading to an investment cycle where costs hit before revenue shows up, **causing margin degradation**.

“ Now let me briefly address the buying environment. We continue to see the measured buying behavior similar to what we experienced over the past 2 years and with the exception of Q4 where we saw stronger bookings. The momentum we saw in Q4 moderated in Q1 and we saw elongated deal cycles, deal compression and high levels of budget scrutiny.
